Arithmetic Sequences - Module 12.1  
(Part 1) Algebra 2 Arithmetic  
Sequences Answer

If the first term of an arithmetic sequence is  $a$  and the common difference is  $d$ , then the  $n$ th term of the

# Get Free Algebra 2 Arithmetic Sequences

Answer Key given by:

$a_n = a_1 + (n-1)d$  An arithmetic series is the sum of an arithmetic sequence. We find the sum by adding the first,  $a_1$  and last term,  $a_n$ , divide by 2 in order to get the mean of the two values and then multiply by the number of values,  $n$ :

## Arithmetic Sequences And Series Worksheet Answers

To find the next few terms in an arithmetic sequence, you first need to find the common difference, the constant amount of change between numbers in an arithmetic sequence.

# Get Free Algebra 2 Arithmetic Sequences

Once you know the common difference, you can use it to find those next terms! This tutorial takes you through that process, so be sure to check it out!

## Arithmetic Sequences

This sequence has a difference of 5 between each number. The values of  $a$  and  $d$  are:  $a = 3$  (the first term)  $d = 5$  (the "common difference") Using the Arithmetic Sequence rule:  $x_n = a + d(n-1) = 3 + 5(n-1) = 3 + 5n - 5 = 5n - 2$ . So the 9th term is:  $x_9 = 5 \times 9 - 2 = 43$ . Is that right? Check for yourself!
