The failure of the 50 mph trike was most likely not caused by wear and tear on the engine, or even damaged parts, but by a simple mistake in the tuning process. Two stroke motors are VERY touchy in the tuning process, if they run too rich, they bog down and quit. if they are too lean, they will over-power themselves, and 90% of the time they ...

you tighten the locking nut. Now use a pencil or soft metal rod, such as a stick of solder, to push the piston right down. Hold it down and tighten the locking nut.

Adjusting an SU carburettor | How a Car Works

Final tuning, after engine has been run rich for break-in 1. START the engine at low throttle and let it warm up for a minute or two. When starting, the throttle (carb opening) should be set somewhere from slightly above idle setting to not more than about 1/4 throttle.

Saito Tuning.

Engine tuning is the adjustment or modification of the internal combustion engine or Engine Control Unit (ECU) to yield optimal performance and increase the engine's power output, economy, or durability. These goals may be mutually exclusive; an engine may be de-tuned with respect to output power in exchange for better economy or longer engine life due to lessened stress on engine components.
